

Expenses Tracker Webapp

The Application consists of a simple HTML Design fuelled by Bootstraps responsive capabilities, as for the backbone, it is some Js I took from an online project that can be found at <https://codepen.io/seklerek/pen/zKDce?editors=1010>.

The user enters a simple entry in the “Add Expenses” page stating the reason, amount and date of the expense, it is to appear as logged in the “Expenditure History” page, shown below.
